

In favor of HB 6355

I believe in common sense gun laws and this one seems beyond obvious. Whatever second amendment rights people treasure so dearly, were conceived prior to such high suicidal and homicide rates. The laws were written before the pervasiveness of cyber bullying and the ability to create guns (and related parts) on 3D printers.

“Extreme Risk Protection laws save lives. As reported in a 2017 Duke-Yale-UCONN study, for every 10 to 20 risk protection orders issued in Connecticut, one suicide is prevented.” Why would anyone not be for the chance to save lives?

I live in Sandy Hook where a few miles from my home, 26 innocent victims were gunned down by a madman in cold blood. There were many signs! Let’s help prevent other towns from the carnage and continued trauma of these tragedies and their subsequent anniversaries.
